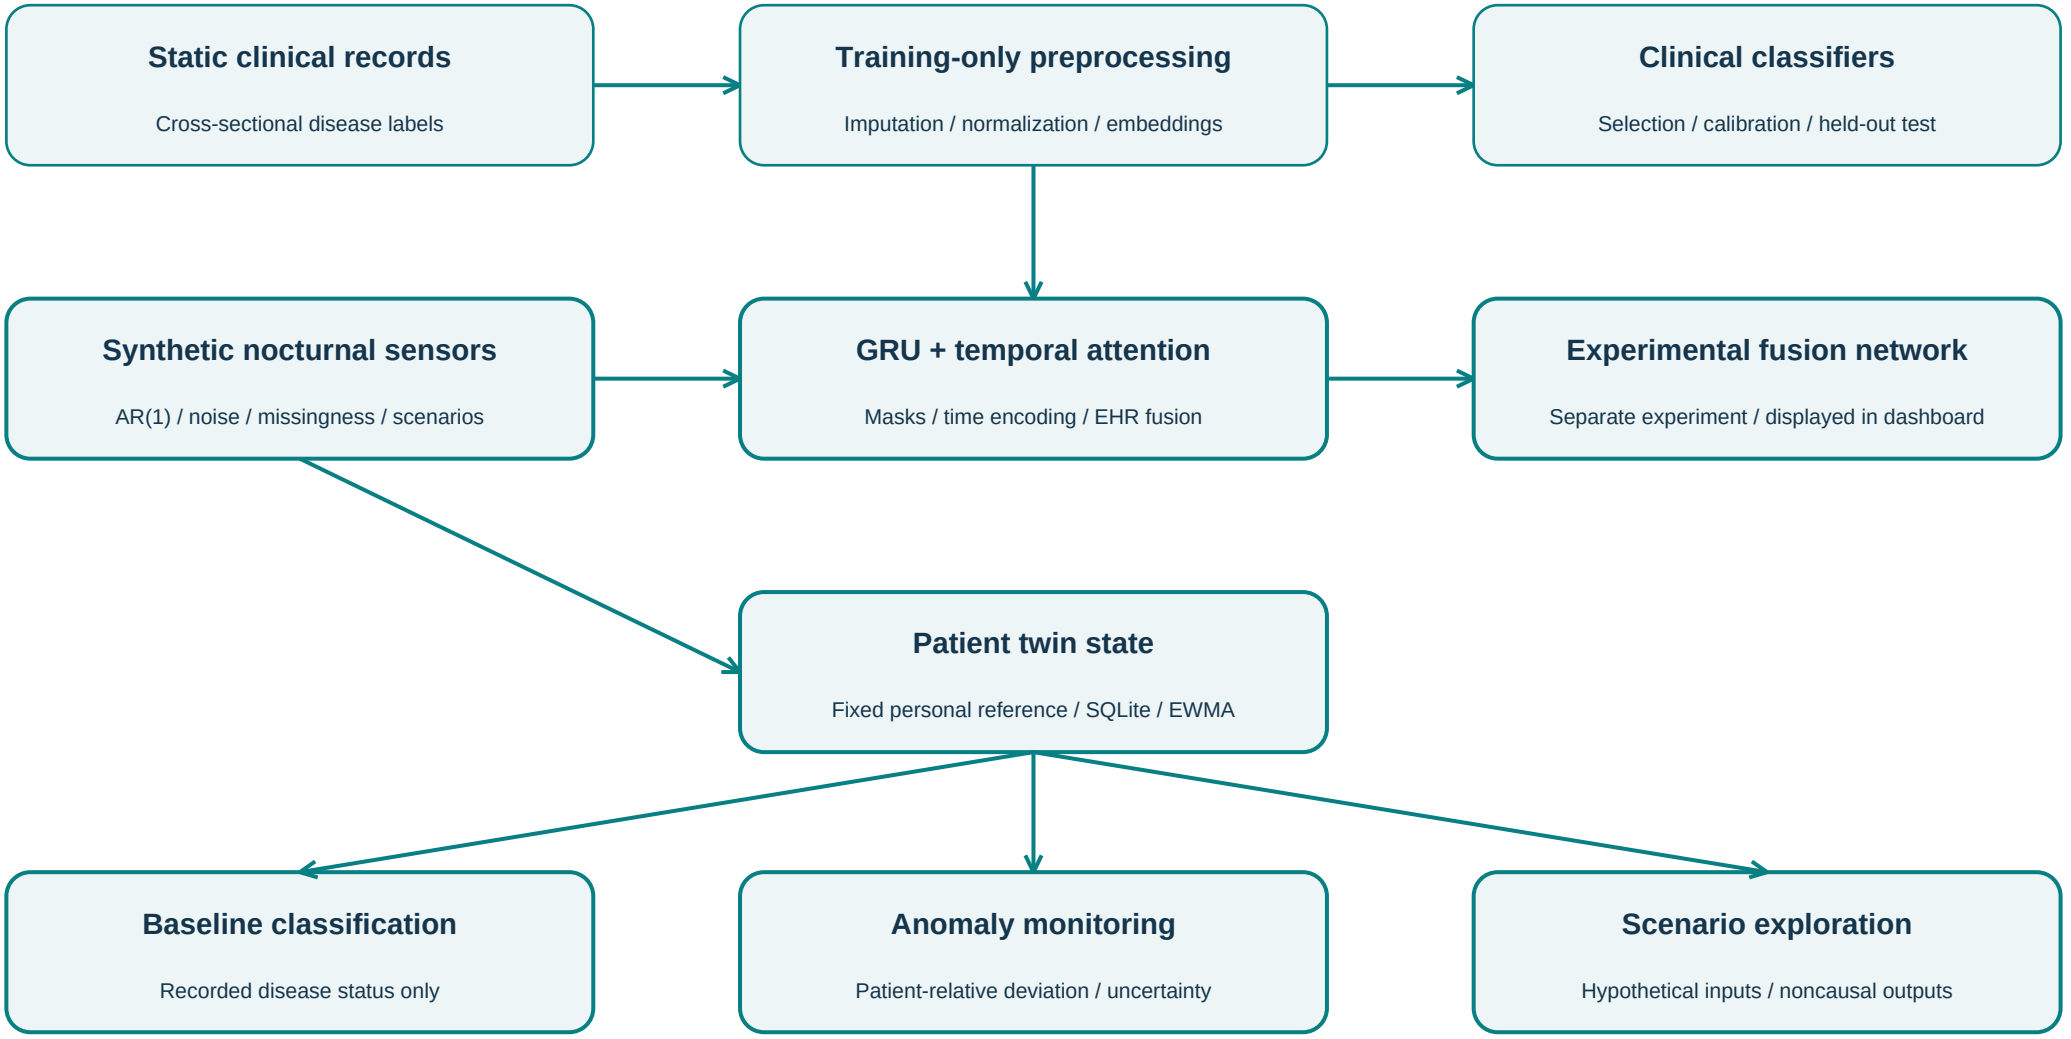
CARDIO TWIN / System architecture

Separated evidence tracks | Local execution | Clinician-facing research demonstration

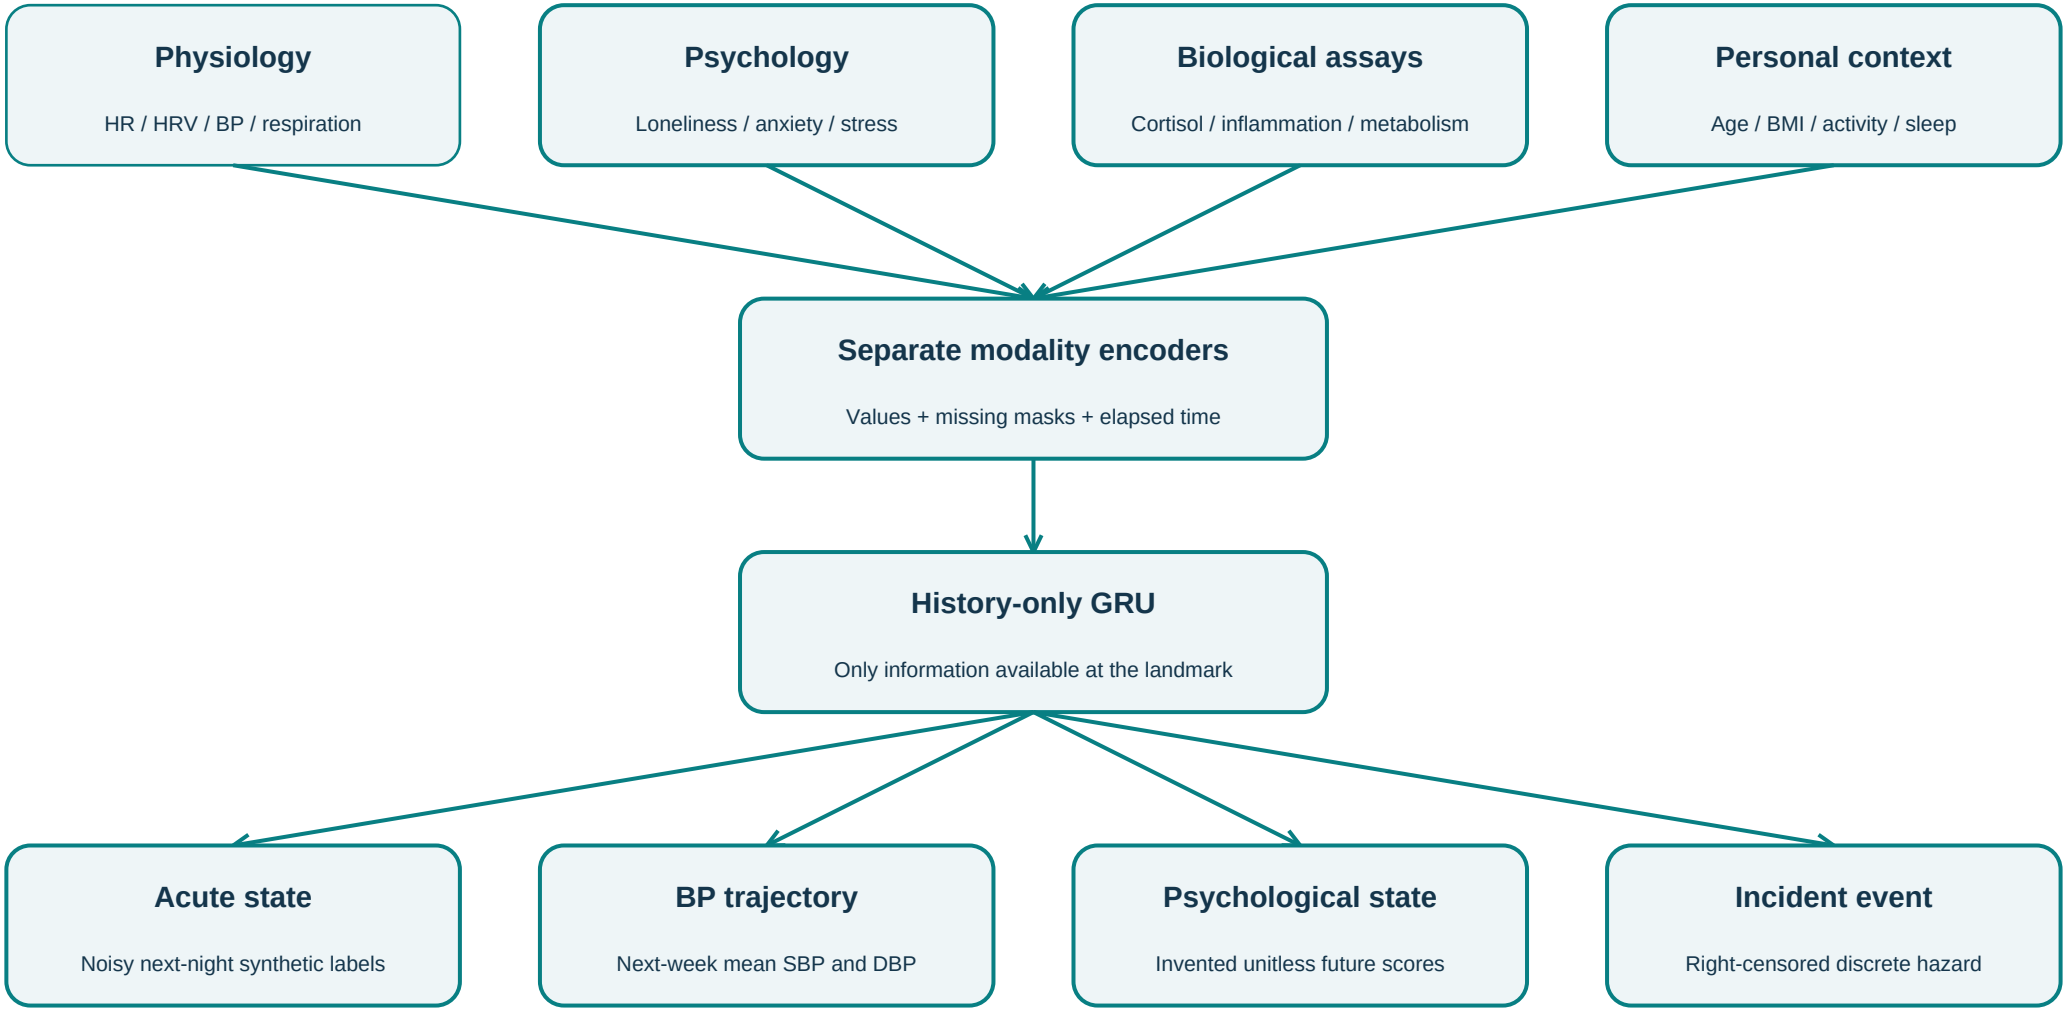


Streamlit doctor dashboard + downloadable patient PDF

No validated clinical event forecast or treatment effect; research prototype only

Loneliness and BP / Research extension

Entirely synthetic longitudinal model | Separate real-data domain comparisons



Additional laboratories: five-axis Kalman state and randomized-trial / IPW estimators

Unknown BP, loneliness, assays and event times are never fabricated for the original CSV.

Synthetic effect sizes and latent coordinates are assumptions, not clinical evidence.
